Kawamura S.,

Kawamura S.,

KNucleotide sequence of the gorilla immunoglobulin alpha 1 gene.";

Nucleic Acids Res. 17:6732-6732 (1989).

-! FUNCTION: Ig alpha is the major immunoglobulin class in body

secretions. It may serve both to defend against local infection
and to prevent access of foreign antigens to the general

immunologic system.

-! SIMILARITY: Contains 3 immunoglobulin-like domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gorilla gorilla gorilla (Lowland gorilla).

The Transmission of the LXXLL motif of coactivator TRBP defines

RT "Ser-884 add accent to the LXXLL motif of coactivator TRBP defines

RT "Ser-884 and TR8.";

RUSTION: Nuclear receptor coactivator that directly binds nuclear

receptors and stimulates the transcriptional activities in a

normone-dependent fashion. Coactivates expression in an agonist-

and AR2-dependent manner. Involved in the coactivation of

different nuclear receptors, such as for steroids (GR and ERS),

different nuclear theorems of the receptor coactivator. May

retinoids (RARS and RXRS), thyroid hormone (TRS), vitamin D3 (VDR)

cactivator, rather than just a nuclear receptor coactivator. May

also be involved in the coactivation of the NF-kappa-B pathway.

MAY coactivate expression via a remodeling of chromatin and its

interaction with histone acetyltransferase proteins.

cactyltransferase RP300 and CRBBP, and the basal transcription

function. Interacts with NCOA1, CRSP3, RBM14, the histone

acetyltransferases RP300 and CRBBP, and with the

methyltransferases RP300 and CRBBP, and with the

methyltransferases NCOA6IP and HRW111/PRWT2. Belongs to the

retinoblastoma-binding protein NRP0-3 (RBPS, alpha-and beta-

retinoblastoma-and manner NRP0-3 (RBPS, alpha-and beta-

retinoblastoma-and nrown nrow

 -!- DOMAIN: Contains two Leu-Xaa-Xaa-Leu-Leu (LXXLL) motifs. Only motif 1 is essential for the association with nuclear receptors, while adjacent Ser-884 displays selectivity for nuclear receptors.-!- PTM: Phosphorylated by PRKDC.-!- PTM: Phosphorylation on Ser-884 leads to a strong decrease in binding to ESR1 and ESR2.
-!- MISCELLANEOUS: Frequently amplified or ovexpressed in colon,
                                                                                                                                           !- CAUTION: Ref.1 (AAR16403) sequence differs from that shown due
a frameshift in position 88.

"Jaggedl, Jaggedz and Daltal to regulate coll-fate determination. Upon ligand activation through the released notch intracellular domain (NICD) it forms a transcriptional activator complex with RBP-J kappa and activates genes of the enhancer of split locus. Affects the implementation of differentiation, proliferation and appoptive programs (By similarity). May regulate branching morphogenesis in the developing vascular system.

"C -I SUBUNIT: Heterodimer of a C-terminal fragment N(TM) and a N-terminal fragment N(EC) which are probably linked by disulfide
                                                                                                                                                                                                                                                                                                                                                                                                                                           SEQUENCE OF 1436-1600 FROM N.A.

PTM: Synthesized in the endoplasmic reticulum as an inactive form which is proteolytically cleaved by a furin-like convertase in the trans-Golgi network before it reaches the plasma membrane to yield an active, ligand-accessible form. Cleavage results in a Cterminal fragment N(TM) and a N-terminal fragment N(EC). Following

Following proteolytical processing NICD is translocated to the nucleus. TISSUE SPECIFICITY: Highly expressed in lung, moderately in heart kidney, and at lower levels in the ovary and skeletal muscle. A very low expression is seen in the brain, intestine, liver and testis.
                                                                                                                                                                                                                                                                                      SEQUENCE FROM N.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NEUROGENIC LOCUS NOTCH HOMOLOG PROTEIN 4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Signal; Phosphorylation; Proto-oncogene.
ligand binding, it is cleaved by TNF-alpha converting enzyme (TACE) to yield a membrane-associated intermediate fragment call notch extracellular truncation (NEXT). This fragment is then cleaved by presentlin dependent gamma-secretase to release a notch-derived peptide containing the intracellular domain (NICD)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Receptor; Transcription regulation; Activator; Differentiation; Developmental protein; Repeat; ANK repeat; EGF-like domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TRANSFORMING PROTEIN INT-3.
NOTCH EXTRACELLULAR TRUNCATION.
NOTCH INTRACELLULAR DOMAIN.
POTENTIAL.
CYTOPLASMIC (POTENTIAL).
                                                                                                                                                                                                                                                                                                                                                                                carcinomas.
--- SIMILARITY: Belongs to the NOTCH family.
--- SIMILARITY: Contains 29 EGF-like domains.
--- SIMILARITY: Contains 3 Lin/Notch repeats.
--- SIMILARITY: Contains 5 ANK repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   EMBL; M80456; AAB38377.1; -...

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
